Dear Hiring Manager at Kleinanzeigen,

Frontend Software Engineer Advertising (w/m/d)

As a frequent user of Kleinanzeigen, I am thrilled to apply for the Frontend Software Engineer position. With over 4 years of experience in frontend development and a Bachelor's degree in Computer Science, I bring a deep understanding of modern web technologies and a proven ability to deliver high-quality applications tailored to user needs.

In my current role at Brandeis's as a fullstack engineer, I am building complex UIs that include graphs, charts, and data visualizations. I have been using TypeScript, React, Redux, and TailwindCSS. I have mastered myself in JavaScript and React through various projects and self-learning. At Arbisoft, I built a shopping store and a career helper platform using Next.js, React, React Native, Redux, and Context API. I have been working with React architecture for the past four years, during which I have grown significantly as a developer. This experience has provided me with a deep understanding of React architecture, including components, state management, hooks, Redux, optimization, and performance. I have experience of writing test case and I have done that in almost every role where I have used Jest, React Testing Library, Playwright for writing unit, integration tests. And also experience with CI/CD pipeline and automated testing.

Along with the frontend, I also have a strong background and passion for backend development, especially with Node.js/django. I have independently worked on many projects, including e-commerce platforms, chat applications, and gaming solutions. My experience includes building robust backend APIs, implementing WebSockets for real-time communication, securing endpoints with authentication and authorization, optimizing database queries for performance, integrating third-party services, and ensuring scalable and maintainable architectures. I am skilled at working with databases like MongoDB, PostgreSQL, MySQL and Redis, and I focus on delivering secure, efficient, and reliable backend solutions.

I am particularly drawn to Kleinanzeigen because of its impact on connecting communities and simplifying everyday transactions. Joining your team represents an exciting opportunity to contribute to a product that millions rely on daily. I am eager to bring my strong technical expertise, collaborative spirit, and passion for user-centric design to your dynamic environment. While I am highly proficient in English (C1), I am also learning German to better integrate into the team and culture. Working at Kleinanzeigen would allow me to grow professionally while contributing to a platform that truly makes a difference.

Best regards,

Malik M. Saqlain
